

Diffusion of innovation within an agent-based model: Spinsons, independence and advertising

Maria Kowalczyk, Anna Szymanek, Patryk Wielopolski

Wrocław University of Technology and Science

Diffusion of innovation - information

Model presentation

2D Lattice simulation

Figure 1: Up - publication; down - ours.

Concentration in time

Concentration

Concentration

$$c_t = \frac{N_{\uparrow}(t)}{N}$$

where

- $N_{\uparrow}(t)$ - number of adopted people, i.e. spinsons with opinion = 1
- N - number of people in network

2D Lattice results

Figure 2: Left - publication; right - ours.

Complete graph results

Figure 3: Left - publication; right - ours.

Watts-Strogatz results

Figure 4: Our work - simulation.

Barabasi-Albert results

Figure 5: Our work - simulation.

Comparison of models

Market penetration level

Valley of death and $h^*(p)$ description

2D Lattice results

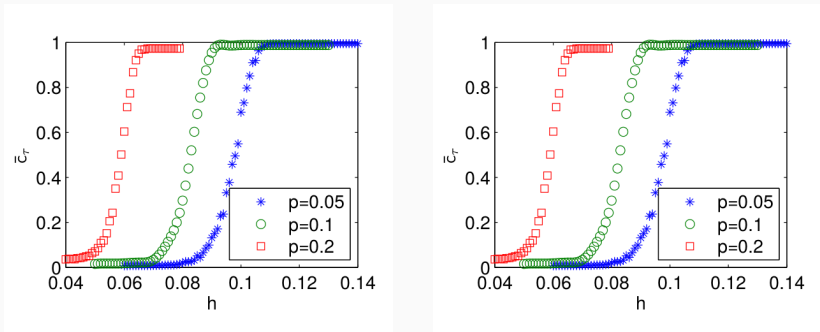

Figure 6: Left - publication; right - ours.

Comparison - Fig. 9 (left) Simulations

Complete graph results

Figure 7: Left - publication; right - ours.

Comparison - Fig. 10 (right) Theoretical results

Watts-Strogatz results

Figure 8: Our work - simulation.

Barabasi-Albert results

Figure 9: Our work - simulation.

Comparison of models

Try to find universal h
